

FOR IMMEDIATE RELEASE

Fountains America Acquires TwoDog Brand Forest Inventory Software

(Pittsfield, NH) July 1, 2009—Fountains America, a forest management, land brokerage, and GIS services company based in Pittsfield, New Hampshire, announces that it has acquired TwoDog forestry software from Foresters Incorporated.

TwoDog is a forest inventory software package used by natural resource managers to collect and process data to help make informed forest management decisions and to provide accurate timber valuation. Created in 1993 by Foresters Incorporated, TwoDog provides a robust suite of functions in a highly customizable package. The software bundle provides accurate timber volume calculations in the office and field. In addition to timber volumes, TwoDog has been designed to enable data collection and process information on a wide range of non-timber variables of interest to natural resource managers. "We are very excited to be able to provide TwoDog to natural resource professionals" says Philip Bryce, Fountains America President. "It is a great addition to our existing suite of products and services."

Both office and field versions of the software are available. OfficeDog runs on a PC and provides extensive custom inventory design and setup tools along with data entry, calculation and reporting functions. PocketDog runs on Windows Mobile based handheld computers as a data collector, providing up-to-now summaries and statistics in the field. The graphical interface and touch screen streamline and simplify data collection in an intuitive manner requiring little to no training for field personnel.

Britt Boucher, President and Senior Forester of Foresters Incorporated, commented that "TwoDog is one of the most established of this type of software and we are pleased that Fountains America will be continuing that reputation."

About Fountains America:

Established in the UK in 1957 as Fountain Forestry, and incorporated in the US in 1980, Fountains America provides complete forest management, land brokerage, and GIS services to an international roster of investors, institutions, corporate and private landowners, and conservation groups. Specialties include sustainable forestry and forest certification, investment due diligence, forestland appraisal, timber valuation, custom GIS applications, and the sale of forestland in the eastern US. With 10 offices throughout the US from Tennessee to Maine and a staff including professionally licensed foresters, real estate and GIS staff, Fountains is well known and respected throughout all sectors of the timberland industry, government regulators, and conservation groups. Fountains America is a wholly owned subsidiary of Fountains PLC, an environmental service company quoted on the Alternative Investment Market of the London Stock Exchange.
